

## **Bibliography of research papers and policy reports examined for ResNet**

Of the following papers the table presents an approximate breakdown of resilience research by age group. This was not possible to ascertain for some papers, as their focus was on a specific disease group (e.g. cancer patients). Likewise, papers that focus on psychometric development and testing are not included in this count.

<b>Population:</b>	<b>Number:</b>
Children/adolescents	106
Adults	32
Older adults	30
Families	16
Communities	12
Transitions from childhood/adolescence into early adulthood	5

The context of adversities tended to focus more on maltreatment and poverty with children and adolescents, whereas for older adults, the context of adversity tended to focus more on significant life events, such as bereavement and ill-health.
